

NIP Project Guide — What You Need to Do

National Internship Program (NIP) · Pega Platform™ · Pega Academy · 2026

Overview

As part of the National Internship Program, you will build a real Pega application from scratch using Pega Blueprint. You will choose one of two projects, complete all 10 user stories, and submit your completed work document along with your Pega instance URL. The best submissions will be selected for further recognition.

Choose Your Project

Project 1	Project 2
Vehicle Service Management Application Build an app for UrbanFleet Operations where customers raise vehicle service requests, advisors inspect and estimate, customers approve, and technicians complete the service.	Movie Ticket Booking Management Application Build an app for CineWave Entertainment where customers book movie tickets, staff manage availability and pricing, customers confirm, and the system allocates seats and notifies.

Important: Choose only ONE project. Read the full project document before you start.

Step-by-Step: What to Do

Step 1: Read Your Project Document Completely

- Download your assigned project PDF (Vehicle or Movie Ticket).
- Read the Scenario, Objectives and all 10 User Stories before touching Pega.
- Note the exact names of the case type, stages, properties and data objects — you must use them exactly.
- Do NOT start building until you understand what each user story requires.

Step 2: Set Up Your Pega Academy Instance

- Follow the Pega Environment Setup and Application Creation Guide step by step.
- Go to: <https://academy.pegasoft.com/mission/business-architect/v8/exercise>
- Log in with your registered email ID.
- Click "Initialize Pega instance for this Mission Exercise" and wait up to 5 minutes.
- Once ready, click Launch to open your Pega instance.
- Log in with: Username **author@uplus** | Password **pega123!**

Step 3: Create Your Application Using Blueprint

- In App Studio, go to Application menu → New Application.
- Choose "Create a Blueprint" → this opens the Pega Blueprint portal.
- Build your blueprint based on your assigned project and its business requirements.
- Download the completed blueprint file.
- Return to App Studio → "Build from Blueprint" → upload your blueprint file.
- Click "Build Now", set your Application Name (exactly as in the project doc), and click Submit.
- Wait for the app to be generated, then click Go to new application.

Step 4: Build All 10 User Stories

- Work through each user story (US-001 to US-010) in your project document.
- Use the exact stage names, property names and data object names stated in the document.
- After completing each user story, run a test case to confirm it works before moving on.
- Key things to build: case lifecycle, data objects, calculated Total Cost, approval flow, correspondence rule, SLA (goal and deadline), and routing to work queues.
- **Do not skip any user story.** Each one is evaluated separately.

Step 5: Run Your Case End to End

- Create a real test case in your application and run it all the way through every stage.
- Make sure the case reaches its final resolved/completed state without errors.
- Your screenshots (Step 6) must show this real working run — not design screens.

Step 6: Complete the Submission Template

- Download the NIP Submission Template (.docx).
- Fill in Section 1 with your name, email, college, state, project chosen, application name, case type name, Pega instance URL and operator name.
- Complete only the section for your chosen project — delete the other project section.
- Paste one screenshot per user story (US-001 to US-010) from your own Pega instance.
- **Every screenshot must show your logged-in operator name visible on screen.**
- **The case you run must contain your own full name** in the Issue Description (Vehicle) or Movie Name (Movie) field.
- Answer all questions in Sections 3 and 4 in your own words.
- Save the file as: **FirstName_LastName.docx** (example: Ravi_Kumar.docx)

Step 7: Submit Your Work

- Go to the submission Google Form — link will be shared separately.
- Sign in with any Google account (Gmail is fine).
- Fill in all required fields in the form.
- Upload your completed document (FirstName_LastName.docx).
- **You can only submit once**, so check your document carefully before submitting.
- Keep your Pega instance intact and accessible until results are announced.
- The form will close automatically at the deadline — do not wait until the last minute.

Key Reminders

- Use **exact names** from the project document for case types, stages, properties and data objects
- All **10 user stories** must be built and screenshotted
- Operator name must be **visible in every screenshot**
- Your **own full name must appear inside the case** you create
- Answers in the document must match what is actually in your application
- Using Blueprint is **encouraged** — tell us what you changed after Blueprint generated the scaffold
- Documents are compared across all submissions — write in your **own words**
- Extra features, screen styling and long answers **do not earn extra marks**
